# Tadeusz Rychter

Frontend Developer

interested in B2B contract work or regular employment

tadeusz.rychter@gmail.com
Warsaw / DACH countries / remote work

I have experience in both working with big legacy codebases and creating new products from scratch in quick iterations. My main areas of expertise are **HTML5**, **CSS3** and **JavaScript**. I am also familiar with **jQuery**, **AngularJS** (1.x), **TypeScript**, **SASS**, **Bootstrap**, **Foundation** and **JSTL**. Creating automated workflows with **Gulp** or **Webpack**, unit testing with **Karma**/**Jasmine** and using **Git** are part of my daily work. I am capable of creating designs in Adobe **Photoshop** and **InDesign**.

A brief overview of my input to the projects I have worked on:

CoCoNet Polska

The CoCoNet group offers a variety of digital financial solutions for banks and service providers. Among its clients are leading banks such as UniCredit and ING.

MULTIVERSA FIP Financial Integration Platform
- Prototyping new functionalities.
- Implementing new screens.
- Co-creating frontend architecture.
- Extending custom API and command line SDK.

MULTIVERSA Financial Dashboard
- Debugging and fixing of complex JavaScript code. – **article**
- Making the dashboard and widgets responsive.
- Modularising 3rd party dependencies while optimising for performance and flexibility.
- Supporting the team with frontend/webdev knowledge.

MULTIVERSA IFP International Finance Portal
- Porting advanced login functionality from a Java applet to TypeScript. – **news release**

GoLocal

golocal.de (200k active users, 3m PV/month)
- Creating frontend for new websites using HTML5, CSS3, JavaScript, JSTL (Spring).
- Fixing various bugs and updating code to use new Google APIs.
- Introducing testing with Selenium, integrating the tests into the build server and CI.
- Developing a responsive newsletter template. – **article**

Meinungsmeister
- Devising an AngularJS app that influenced the marketing strategy. – **article** and **demo**
- Conceptualising and developing processes for batch personalisation of print products (Adobe InDesign; SVG). – **article**
- Redesigning project's main website largely improving its performance (time to render).
- Introducing an automated CSS workflow based on Gulp and PostCSS.
- Architecturing and developing a configurable, mobile-first widget.
